

## Learn More About Title V's Role in Medicaid Managed Care

## TITLE V ROLE AND MEDICAID MANAGED CARE

As described in the introduction, the 10 Essential Public Health Services are a key framework underpinning this workbook. Complete the table below to assess your state Title V program's level of activity related to Medicaid Managed Care and level of capacity to participate in work related to MMC.

In addition to the examples of Title V collaboration in the MMC Procurement process described in Section 3, state Title V agencies can also:

- Share their expertise in delivering services, including care coordination, to CYSHCN<sup>59</sup>
- Elevate the importance of transition planning as an important service within managed care arrangements and contribute to establishing financing for transition services within managed care<sup>60, 61</sup>
- Partner with MMC to establish quality measures that reflect the needs of CYSHCN<sup>62</sup>
- Elevate examples of MCO contract language that is specifically tailored to support CYSHCN. The following resources may be especially helpful:
  - [Serving Children and Youth with Special Health Care Needs in Medicaid Managed Care: Contract Language and the Contracting Process](#)
- Elevate the *National Standards for CYSHCN* as a resource to inform MMC contracting processes
  - For examples, see [How States Use the National Standards for CYSHCN to Strengthen Medicaid Managed Care for Children with Special Health Care Needs](#)
